

This is an animation pack that contains a bonus model. There are 183 zombie animations and an additional 15 victim animations. There are two versions of the victim animations included, one uses the same rig as the zombie, and the second set can be found in the UnityManVictim folder and uses our unity man rig. We've included both versions so that you can use whichever one works better for your project.

The zombie animations are configured using an avatar generated from the included female zombie model. The unity man animations are configured using the included t-pose.

There are also 39 blendshape face animations included that work with the zombie model.

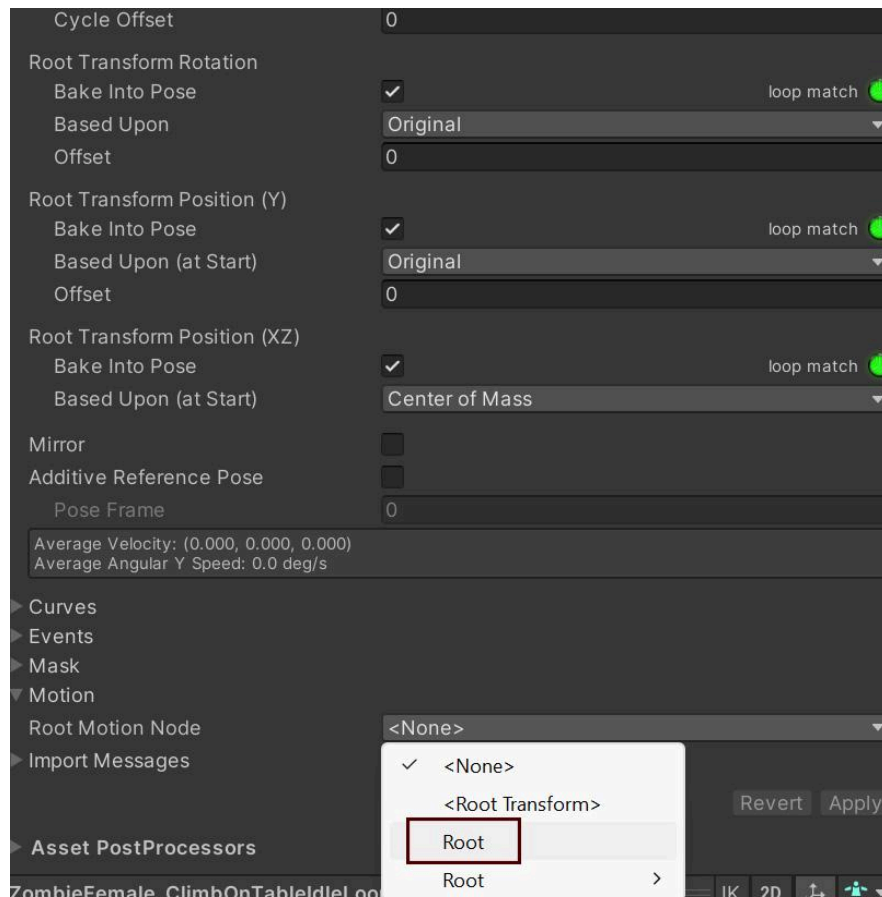

Q: How do I use root motion?
OR the animation is looping in place, how do I fix it?

A: Uncheck "Bake into pose" in the animation settings and make sure "use root motion" is checked for the character.

You may need to make adjustments to the animation settings depending on your specific needs, but these settings should generally work.

Or, you can select the “motion” dropdown at the bottom of the animation tab and set the “root motion node” to “root” This will disable the bake into pose options and have the character just use root motion.

Q: How do I use the animations in place?

A: You can adjust the settings as follows: check “bake into pose” for root transform rotation and root transform position (y). Uncheck it for Root Transform Position (XZ).
